THE FUTURE IS BRIGHT.

WITH A NEW MANUFACTURING FACILITY, ADDITIONAL
SERVICE CENTERS AND EXPANDED SERVICE AND PARTS TEAM

We're more prepared than ever to deliver.

For more than 75 years, Terex Utilities has been a pioneer of insulated and digging equipment for the electric utility industry. Along the way, we've established a pattern of innovation and continuous improvement in order to deliver solutions so linemen can be productive and keep the lights on for their customers. This is an exciting time in Terex Utilities' history – with strategic investments being made in our manufacturing capabilities, our service footprint, new products, team members and overall customer experience. The future is looking bright, and we're excited to continue delivering equipment and service solutions to the electric utility industry – now better than ever.

Give us a call at 844-TEREX-4U for your equipment, service and parts needs.

www.terex.com/utilities

WORKS FOR YOU.™

New From:

Skid Mount Box

Solar-powered systems consist of many parts – from batteries and charge controllers to converters and fuses.

Housing all of these components in a single, easy-to-access job box is a very effective way to organize, utilize and transport the equipment around remote areas.

Through robust protection from outdoor elements (sunlight, moisture and debris), investing in a heavy-duty solar job box can also save you money in the long term.

Larson Electronics manufactures and designs solar job boxes for industrial, outdoor applications. These units are secured on a skid base for seamless transportation with forklifts and vehicles.

Solar panels can be included on the skid base, as well as a genset for backup power. Models with masts are also available for raising equipment in outdoor locations. This solution is recommended for job sites requiring elevated lighting, security and more.

For added protection in rugged environments, our solar job boxes on skid bases are finished with a durable powder coating. This protects the frame and makes the overall system more resilient in outdoor areas. •

Portable Electrostatic Sprayers

Problem: You need an effective way to sanitize your business facilities thoroughly and quickly, to prevent the spread of the corona virus or other disease-causing microbes.

Initially, you tried wiping down the area at the end of every work day – but the process is extremely time consuming. Getting around bulky machines, equipment, furniture and dividers is no easy task!

Solution: Use the Larson Electronics portable electrostatic sprayer to sanitize buildings and rooms easily, without coming in contact with dirty surfaces.

Why: Portable electrostatic sprayers work by releasing a charged mist into the area. The mist contains sanitizing properties that “wrap” around contaminated surfaces or equipment. Compared to abrasive liquid cleaners, this solution is non-corrosive and can be applied from a safe distance.

Larson Electronics portable electrostatic sprayers are battery powered, allowing individuals to clean hard-to-reach sections of the building. Our cordless unit with a 4.22-gallon tank can cover up to 40 acres per charge (five acres per hour).

Applications: Portable electrostatic sprayers are recommended for industrial facilities, commercial areas, restaurants, offices, schools, public transit areas and more! •

Portable Explosion Proof Light Towers

Daylight savings time is slowly but surely approaching. Many businesses in the industrial sector are already preparing for the inevitable yearly event, which is scheduled for November 7.

Instead of succumbing to months of longer nights and shorter days, what can you do to keep operations in hazardous locations going?

Daylight savings time is slowly but surely approaching. Many businesses in the industrial sector are already preparing for the inevitable yearly event, which is scheduled for November 7.

Instead of succumbing to months of longer nights and shorter days, what can you do to keep operations in hazardous locations going?

For combustible job sites, Larson Electronics portable explosion proof light towers serve as reliable and superior light sources. With these units around, you can keep work areas functional, while improving overall safety for workers.

Our Class-rated light masts generate powerful illumination and are easy to transport around work facilities!

New JLG® RT and ERT Scissor Lifts Now Available

New generation 40-ft and 47-ft diesel engine (RT) and electric (ERT) rough terrain models

JLG Industries, Inc., an Oshkosh Corporation company [NYSE:OSK] and leading global manufacturer of mobile elevating work platforms (MEWPs) and telehandlers, now offers its new generation of rough-terrain (RT) and electric rough-terrain (ERT) scissor lifts in 40-ft and 47-ft models. The new 4069 and 4769 RT/ERT scissor lifts feature class-leading platform size and an 800-lb capacity to carry more to height, as well as full drive at height capability. The tallest machines in their class, the RT4769 and ERT4769 provide users with access to five-story heights — an industry first.

Platform Enhancements

The platforms on the new JLG RT and ERT models are designed to get users closer to the work area while

allowing them to bring more people, tools and material to height. These models offer class-leading capacities, delivering 28% more working area and a zero-platform offset. This feature minimizes the distance users have to reach to access work on buildings or other structures.

Drive At Height Capabilities

The new rough terrain units can be driven fully elevated, both indoors and out, for greater productivity and efficiency. This allows these lifts to operate along the length of a building at a fixed height, resulting in fewer trips up and down throughout the day. The RT models are available in both 2WD and 4WD configurations, while the ERT models are available in 2WD.

Platform Controls

The new platform control box with LCD display on these lifts incorporates new technology that focuses on integrating data that allows operators to better understand the machine's performance and capabilities. For example, it is able to provide users a multitude of productivity, terrain, machine health and safety notifications during use.

It also includes JLG's exclusive LiftSense™ technology, an evolution of variable tilt, which shows the users the maximum height they can achieve, before they elevate, based on side-to-side and front-to-back tilt and weight in the platform.

Standard Features

Like the new 2669 and 3369 RT/ERT models introduced in late 2020, the new 4069 and 4769 RT/ERT scissor lifts come in either diesel/dual fuel engine models with hydrostatic drive (RT) or battery-powered, AC electric drive models (ERT). The ERT models feature regenerative braking, which actively recharges the batteries during machine use.

All JLG RT and ERT models come with rails that fold with ease. They can also be collapsed in three minutes or less, to allow operators to maneuver the machine in and through tight spaces.

And, all of these new rough terrain scissor lifts are ANSI A92.20/CSA B354 compliant, featuring a load sensing system that can be calibrated without weight.

Options and Accessories

Along with industry-leading standard features, these

new JLG rough terrain scissor lifts are available with a variety of options and accessories, like pipe racks and leveling jacks, to make the work day more productive.

CleanGuard™, a leak containment system that protects sensitive flooring by safeguarding the risk of leaks, is an environmentally friendly option available on ERT models that gives users the confidence to work in more places.

QuikLevel Advanced is an available option on the RT models, allowing operators to automatically level the stowed scissor lift on side slopes up to 4.5 degrees and then elevate and drive at full height under certain conditions. This feature is especially beneficial when performing work at height along the outside length of a building that has been graded for drainage at a consistent slope.

For a list of JLG RT scissor lift models, visit <https://www.jlg.com/en/equipment/scissor-lifts/engine-powered-rough-terrain/rt-series>.

For a list of JLG ERT scissor lift models, visit <https://www.jlg.com/en/equipment/scissor-lifts/electric/ert-series>.

To learn more about the new generation of JLG RT and ERT scissor lifts, visit <https://www.jlg.com/en/destination/new-rough-terrain-scissors> or watch the detailed walkaround video on YouTube.

PRINOTH Continues the Introduction of its Next Generation of vehicles with PANTHER T6, T8, and T12 Models

"The Legacy Standards Boosted to yet Another Level"

PRINOTH continues to unveil its next generation of PANTHER crawler carriers – the PANTHER T6, T8 and T12. After selling several hundred vehicles throughout the world in the last years, PRINOTH resets the productivity standards again with these new versions. By carefully listening to our customers and learning from their usage of our units, the legacy fleet has now been improved to boost the productivity levels. Specifically on the bare chassis version, the payload has been increased by about 2,000 lb per model and now allows for even more implements and tools to be installed which will provide even more versatility to an already very agile fleet.

Sturdier, even quicker

Following the improvements on the rotating dumper models, the PANTHER T14R and T7R, PRINOTH is happy to report efficient changes into the T6, T8 and T12 vehicles' design to improve their operation levels and maximize capacities. By boosting the speed on most of the units, especially the PANTHER T12 which now presents with a 35% speed increment, PRINOTH strives to help its customers do more with less like moving less dead weight, fitting bigger implement on smaller machines and continually increasing their profitability on the jobs that they land. After all, our company purpose statement is "Your success is our passion". We've made tremendous productivity improvements on the PANTHER T12. These changes will bring the

SCHWEISSDOORS.COM

T12 neck to neck with its rotary sister model, the PANTHER T14R renowned for being best-in-class for ground speed levels.

“Current business conditions dictate that “the doing more with less” approach is the name of the game. That is why the PRINOTH corporate culture calls for us to listen closely and communicate constantly with our customers, while using an agile approach to provide long lasting solutions to the specialized off-road construction market,” commented PRINOTH CEO, Alessandro Ferrari.

For the first time, the PANTHER T12 dumper model will be available with the unique spacious wide cab giving much more room for operators whilst keeping the steering wheel and foot throttle pedal driving system. “Our vehicles drive just like any truck and this system is part of providing comfort to the operator which we feel is as important to the operator as it is to the contractor who employs them. We’re constantly pushing the envelope and aiming to have the best operator comfort as it clearly boosts productivity,” commented Product Manager, Patrick Hébert.

The Best Uptime Everywhere

One aspect that PRINOTH and its team prides itself on is to simply provide customers with the best uptime with these vehicles. PANTHER Crawler Carriers continually provide unparalleled uptime and performance by virtue of the vehicles’ high quality components and built and by working into unit designs less hassle for scheduled or preventive maintenance involving key components that could put the machine down for hours. PRINOTH vehicles are built on an assembly line with strong processes and rigorous quality checks because the company targets nothing but the best quality standards. What’s more, PRINOTH has dedicated field testing engineers who put the units through extreme duty cycles in

different tough conditions to ensure customers get working vehicles every time.

Built-in Versatility

The PANTHER T8 has often been referred to as the most versatile tracked vehicle on the market because of its size and capacities, but also because of the amazing possibilities this vehicle offers for both equipment and materials transportation to hard-to-access areas.

As part of its services to customers, PRINOTH offers a Factory Installation Guide and has a dedicated Factory Application Team who supports special requests from the field. Customers share their challenges and, the Factory Application team develops solutions together with them, listening and collaborating intensively throughout the project to ensure the best solutions are found for those specific needs.

Considering that PANTHER crawler carriers are all built on a 34-inch standard truck style chassis with available power pad and built-in hydraulic connections, equipping off-road vehicles with implements other than dump bodies is simple and safe with PRINOTH’s units.

Technology Upgrades

This new generation of PANTHER vehicles are now powered by CAT double-label engine models EPA Tier 4 Final/EUROMOT Stage V, making PANTHER the first complete crawler carrier line-up using the new most demanding emission regulation engine technology. The engine upgrade is also supporting PRINOTH’s Clean Motion philosophy for sustainability; the company’s forward-thinking corporate philosophy synonymous not only with low energy consumption but also with environmental protection in ecologically sensitive areas. •

Making perfect connections has never been simpler. In fact, now it's a **SNAP!**

Construction Barricades

We Rent Nationwide.

TRAFFIC CONTROL & CONSTRUCTION SOLUTIONS

Trinity Highway Rentals is the #1 manufacturer of water-filled barricades with the largest inventory in stock and ready to ship. We offer Construction Site, Airport, Work Zone, and Traffic Control solutions that are less susceptible to movement than chain-link fences, drums, and cones. Our water-filled barricades are made in the USA and can be assembled to meet various construction site needs, including perimeter fencing and pedestrian walkways. Flexible rental options are available to accommodate multi-phase projects.
