When Rain or Sweat is Pouring Down, Don't Live with it—Channel It!

Brass Knuckle® Crusher safety goggles with contoured channels route moisture away from eyes

Whether working in the elements or working up a sweat, only Brass Knuckle® Crusher (BKDST-1020NP) safety goggles have specialized channels along the brow line to move water and sweat away from the eyes, while the rubber gasket seals glasses snugly against the face. The gasket does double-duty as anti-dust protection, too. Only Crusher offers this unique type of liquid splash protection from a traditional dust goggle.

Crusher is the ultimate in see-clearly workwear. Not only do the contoured channels route moisture away to help vision remain clear, proprietary N-FOG™ PLUS anti-fog technology offers superior performance under the highest heat and humidity for a long-lasting, fog-free view.

Crusher's design is popular for its modern look. The cool wraparound styling of the one-piece 10 base curve lens offers high-impact protection and an unobstructed field of vision—an almost unprecedented optic range. But make no mistake; this is more than a looker. Super-flex temples hug any size face

Brass Knuckle® SmartSkin™ Nitrile Gloves: Double-Dipped For Twice the Protection, Grip

Two coats of NBR for extra protection from the world's worst jobs

Why double dip? Usually because you want more of something good. In the case of Brass Knuckle® SmartSkin™ nitrile gloves (BKNITR2), double-dipping them in nitrile butadiene rubber (NBR) gives wearers twice the protection and twice the grip. Nitrile stands up to chemicals, oils, most harmful cleaning solvents, and resists bodily fluids and waste. If you have to work in unpleasant substances and it's vital that you hang onto your tools, SmartSkin is the right choice.

SmartSkin starts with a thin gauge, 18 mil nylon shell with a full NBR over coat. Then a second coat of NBR is added to full fingers and palm—and this coat has a sandy finish that's extra grippy, even when wet. In addition to added grip, the second coat provides extra resistance to abrasions, tears, and punctures in critical wear areas (nitrile has three times the puncture resistance of latex).

SmartSkin gloves are also the barrier of choice for workers in the oil and gas sector. These workers need impermeable gloves that protect against skin exposures when working around any oil operations and when transferring process fluids. Durable nitrile is ideal protection for these applications and more.

An estimated six out of every 100 professional janitors suffers chemical-related injuries, which include burns to the skin caused by harmful chemicals found in cleaners. These same workers require protection from bloodborne pathogens, germs, and good-old-fashion yuck.

When you really don't want to touch it, but your job says you have to, SmartSkin bears the brunt for you, protects your skin, and makes it easier to grip tools.

For more information, visit <https://www.brassknuckleprotection.com/products/smartskin-bknitr2>.

About Brass Knuckle

Brass Knuckle® grew out of a partnership with one of North America's oldest dedicated safety product supply companies. From product inception to quality control, we manage every aspect of product

An advertisement for Jesco Industries, Inc. The top left features the 'jesco' logo in green with 'Since 1932' underneath. To the right, the company address is listed: 'Jesco Industries, Inc. 950 Anderson Rd PO Box 388 Litchfield, MI 49252-0388'. Below the logo, several safety products are shown in a grid: a wire mesh guardrail, a yellow metal guardrail, a yellow toe board, and a yellow safety gate. A 'ProGMA' logo with the tagline 'safer by Design' is also present. At the bottom, a red circular seal says 'Jesco does it best!'. The bottom of the ad features the text 'Visit JescoOnline.com' and 'Call 800-529-6697' in large, bold letters.

Seatbelt Engagement & Operator Presence Option for JLG® Telehandlers Now Available

Offered on new 742, 943, 1043, 1055 & 1255 JLG models

JLG Industries, Inc., an Oshkosh Corporation company and leading global manufacturer of mobile elevating work platforms (MEWPs) and telehandlers, now offers a Seatbelt Engagement and Operator Presence option for JLG® 742, 943, 1043, 1055 and 1255 telehandler models. This system, which includes seatbelt engagement assurance and operator presence functionality, as well as a high visibility orange seatbelt, uses visual and audible alarms, as well as limits machine functions, to enhance safety during telehandler operation.

Seatbelt engagement assurance functions by producing a visible and audible alarm that activates whenever an operator is seated and unbuckled. For example, when the operator is seated with the vehicle ignition key on, alarms will be activated immediately and continuously. The alarms will cease when the operator leaves the seat or turns the vehicle ignition off.

Unitrex XS™ Max Wear. Unmatched performance in the field and in the boardroom.

Electric line stringing is easier and more economical with Unitrex™. Made with a core of Honeywell Spectra®, it is up to 10 times lighter than steel, while delivering comparable strength. The urethane-coated polyester jacket provides excellent abrasion resistance for great productivity that lasts.

To learn more, visit www.yalecordage.com

YALE CORDAGE
Performance. Passion. Possibilities.

77 Industrial Park Road | Saco, Maine 04072 | p (207) 282-3396, f (207) 282-4620

The alarms are intended to alert and remind the operator and will not prevent engine start up or hydraulic and drive functions, similar to seat belt alarms in automobiles.

Operator presence functionality prohibits engine start and hydraulic functions if an operator is not present. Additionally, if the system detects a loss of seat pressure during operation, one of the following will occur:

- If the park brake is engaged and the transmission is in neutral, hydraulic controls are disabled. Upon returning to a seated position, the hydraulic controls are enabled.
- If the park brake is disengaged and the transmission is in neutral, hydraulic controls are disabled and the cabin alarm sounds continuously. Upon returning to a seated position, hydraulic controls are enabled, and the cabin alarm will cease.
- If the park brake is disengaged and the transmission is in forward or reverse, hydraulic controls are disabled, the cabin alarm sounds continuously, and the transmission shifts to neutral. Upon returning to a seated position, hydraulic controls are enabled, and the cabin alarm will cease. The transmission will need to be returned to neutral to allow the system to reset prior to re-engaging forward or reverse travel.

For more information on this new option, visit www.jlg.com/en/equipment/new-and-featured •

It's not always romantic...

Make sure your power equipment is fully operational.

With over 35 years experience, Cadick Corporation uses state-of-the-art software and standards of IEEE, ANSI, NFPA, and other applicable industry regulations to develop customized engineering studies for your facility.

- Extensive analysis & reporting
- Fabrication & installation
- Comprehensive electrical safety audits
- Engineering studies
- Electrical safety services
- Training

The benefits of using Cadick engineering services include:

- Safe and efficient operation of the electric power system
- Reduced fees and fines incurred due to poor power factor or other such problems
- Reduced power bills
- Compliance with regulatory standards such as OSHA and NEC
- Protective device settings that provide the most optimal mix of properly rated & calibrated protective equipment
- Enhanced safety of personnel for arcing events
