Portable Electrostatic Sprayers

Problem: You need an effective way to sanitize your business facilities thoroughly and quickly, to prevent the spread of the corona virus or other disease-causing microbes.

Initially, you tried wiping down the area at the end of every work day – but the process is extremely time consuming. Getting around bulky machines, equipment, furniture and dividers is no easy task!

Solution: Use the Larson Electronics portable electrostatic sprayer to sanitize buildings and rooms easily, without coming in contact with dirty surfaces.

Why: Portable electrostatic sprayers work by releasing a charged mist into the area. The mist contains sanitizing properties that “wrap” around contaminated surfaces or equipment. Compared to abrasive liquid cleaners, this solution is non-corrosive and can be applied from a safe distance.

Larson Electronics portable electrostatic sprayers are battery powered, allowing individuals to clean hard-to-reach sections of the building. Our cordless unit with a 4.22-gallon tank can cover up to 40 acres per charge (five acres per hour).

Applications: Portable electrostatic sprayers are recommended for industrial facilities, commercial areas, restaurants, offices, schools, public transit areas and more! •

Portable Explosion Proof Light Towers

Daylight savings time is slowly but surely approaching. Many businesses in the industrial sector are already preparing for the inevitable yearly event, which is scheduled for November 7.

Instead of succumbing to months of longer nights and shorter days, what can you do to keep operations in hazardous locations going?

Daylight savings time is slowly but surely approaching. Many businesses in the industrial sector are already preparing for the inevitable yearly event, which is scheduled for November 7.

Instead of succumbing to months of longer nights and shorter days, what can you do to keep operations in hazardous locations going?

For combustible job sites, Larson Electronics portable explosion proof light towers serve as reliable and superior light sources. With these units around, you can keep work areas functional, while improving

It's not always romantic...

Make sure your power equipment is fully operational.

With over 35 years experience, Cadick Corporation uses state-of-the-art software and standards of IEEE, ANSI, NFPA, and other applicable industry regulations to develop customized engineering studies for your facility.

- Extensive analysis & reporting
- Fabrication & installation
- Comprehensive electrical safety audits
- Engineering studies
- Electrical safety services
- Training

The benefits of using Cadick engineering services include:

- Safe and efficient operation of the electric power system
- Reduced fees and fines incurred due to poor power factor or other such problems
- Reduced power bills
- Compliance with regulatory standards such as OSHA and NEC
- Protective device settings that provide the most optimal mix of properly rated & calibrated protective equipment
- Enhanced safety of personnel for arcing events

Zyter Collaborates with Zurich North America, Qualcomm and Everguard to Enhance Construction Safety

Pilot Started at Rudolph Libbe Group Construction Site, with Insurance Provider Zurich North America evaluating impact for potential use with other customers

Zyter, Inc., a leading digital health and IoT-enablement platform, announced today it is collaborating with Zurich North America (Zurich), Qualcomm Technologies, Inc., Everguard.ai (Everguard) and Rudolph Libbe Group (RLG) to advance the use of AI-based Internet of Things (IoT) technologies to enhance construction safety. The goal is to help prevent jobsite incidents and accidents that can result in serious injuries and costly property damage.

The five companies are bringing together best-in-class technologies and risk knowledge to provide construction managers with a 360-degree view of construction sites and real-time alerts regarding workers' adherence to safety regulations. The collaboration represents the next step forward in propelling construction safety from a reactive to a proactive approach.

Zyter's SmartSpaces™ platform, analytics and front-end dashboard is being integrated with Everguard's Senti360® AI platform, made possible through the Qualcomm® Smart Cities Accelerator Program and Qualcomm® IoT Services Suite. RLG, a provider of construction and facility services, will beta test the collaborative solution at one of its jobsites, beginning in September 2021. RLG's insurance provider, Zurich North America, will monitor the impact and evaluate the solution for use with other construction customers.

"This collaboration takes best practices for construction site management and worker safety to a new level," said Sanjay Govil, founder and CEO of Zyter, Inc. "Together we are making worker safety more manageable

for the construction industry by delivering improved visibility across an entire worksite.”

“Zurich connects our customers with innovative technology solutions that put their workers’ health and safety first, which is key to delivering quality work both on time and on budget,” said Jon Tate, vice president of construction risk engineering for Zurich North America. “Through this collaboration, we are exploring how to enhance construction site managers’ ability to see and stop at-risk behaviors and to identify any needs for supplemental training and other resources to support safety going forward. We want to help clients like RLG prevent accidents and injuries, and potentially save lives.”

Each technology partner is bringing different capabilities and expertise to the project:

Qualcomm Technologies – This unique collaboration is enabled through the Qualcomm Smart Cities Accelerator Program and Qualcomm IoT Services Suite. This suite delivers comprehensive, end-to-end, IoT as a Service (IoTaaS) solutions, enabling the digital transformation of smart cities, connected spaces, and experiences globally. Smart solutions and technologies are at the forefront of driving the next generation of smart spaces and construction sites, enriching lives through the accelerated transformation of infrastructure and services.

Hydraulic Detachable Gooseneck

For more than two decades, our Hydraulic Detachable Gooseneck Trailer has been North America’s bestselling detachable lowboy for construction professionals—and for good reason. It’s engineered to make unhooking, loading and unloading, and hooking up again a simple one-person operation.

WE HAVE THE ROPE TO GET THE JOB DONE.

BUCCANEER
rope company
Providing strength & stability, with a twist.

Zyter – Serving as a collaborator with the Qualcomm Smart Cities Accelerator Program ecosystem members, this smart construction solution runs on the Zyter SmartSpaces platform, which is used to break down silos of information by integrating and consolidating data from IoT devices and applications in a seamless interface. Zyter is also providing advanced analytics.

Everguard –Everguard’s Sentri360 platform ties together industrial sensor technologies using sensor fusion, edge compute and AI algorithms, enabling them to learn dynamically “on the job.” This has the potential to lower incidents, injuries and corresponding costs. Everguard has been recognized as a unique solution for prioritizing construction safety and the digital management of construction sites, enabling a proactive approach to both safety and productivity powered by AI and sensor fusion.

Using a continuous stream of real-time data from IoT devices on workers and building materials, this collaborative solution will deliver a seamless, up-to-the second view of what is happening across the entire construction site to the Zyter dashboard. Additionally, through state-of-the-art data visualization, analytics and intelligent insights, construction companies will be able to easily monitor and address events, operational issues, and incidents. Advanced analytics will help construction companies determine worker productivity and safety scores, as well as gain insight into other metrics related to construction site management.

Initial efforts will focus on using AI and computer vision (CV) to enhance safety protocols already in place on construction jobsites for initiatives such as personal protective equipment (PPE) compliance and geofencing of restricted areas.

"We are excited to collaborate with Everguard.ai and Zyter to deliver smart solutions via Construction-Management-as-a-Service," said Sanjeet Pandit, senior director of business development and global head of Smart Cities, Qualcomm Technologies, Inc. "Prioritizing construction safety and digital management of construction sites allows construction companies and their commercial insurance providers the ability to focus on worker safety. Construction-Management-as-a-Service will continue to accelerate the transformation of city infrastructure and services to help enrich communities' lives."

"These five companies share a dedication to being technology and safety leaders in our respective fields," said Sanjay Pandya, P.E., vice president and general manager of construction at Everguard. "The dedication to safety this group of innovators embraces is unmatched. We couldn't be more thrilled to have Senti360® at the heart of this collaboration."

RLG, a single source provider of construction and facility services that range from site selection and construction to energy solutions and ongoing facility management, will beta test the collaborative construction safety solution. "Our expertise goes well beyond that of a typical construction company," said Brad Deal, senior vice president-construction services, Rudolph Libbe Inc., a Rudolph Libbe Group company. "We bring our safety-first culture to every project and service we deliver. Collaborating with this group of innovators allows us to expand our tools and technology. For us, it all comes down to delivering a better, safer work site for our customers." •
