## Uni-Craft Corp.'s Ergonomic Lift & Turn Optimizes Palletizing Applications

Uni-Craft Corp. combines the unlimited versatility of Scissor Lifts with the ability to effortlessly rotate and access heavy products for the ultimate ergonomic lifting and positioning solution. Designed for use in palletizing applications, the Lift and Turn is a scissor lift with a manual turntable that can handle up to 4,000-pound loads and is capable of turning 360°.

The Lift and Turn's travel distance ranges up to 72 inches, has multiple portability options, and the turntable platform itself can be rectangular, square, or circular depending on the application need. Strong and durable, the Lift and Turn features solid steel one-piece arm assemblies that range from 1/2 inch to 3/4 inch thick, depending on travel, load capacity, and portability selections. The low-profile design minimizes overall lift height, enabling easy and direct loading without the cost or need of a pit installation. Full 360° load access increases productivity by reducing unnecessary walking or reaching and allows operators closer contact with the platform to add or remove pallet loads. Ergonomically lifting and positioning heavy loads to manageable heights improves assembly control and optimizes

# LineWise Introduces Line Cart for Use on Single Static Lines

LineWise has introduced a Line Cart designed for use on single static lines. Featuring a 300-pound capacity, the new product is designed to provide a safe mobile platform when performing line inspection, installing marker balls or bird diverters, and other regular maintenance tasks on transmission lines.

The only product of its kind on the market, the Line Cart provides an excellent alternative to bucket trucks, which are inefficient because of the need for constant repositioning. The ability for one person

# It's not always romantic...

## Make sure your power equipment is fully operational.

With over 35 years experience, Cadick Corporation uses state-of-the-art software and standards of IEEE, ANSI, NFPA, and other applicable industry regulations to develop customized engineering studies for your facility.

- Extensive analysis & reporting
- Fabrication & installation
- Comprehensive electrical safety audits
- Engineering studies
- Electrical safety services
- Training

The benefits of using Cadick engineering services include:

- Safe and efficient operation of the electric power system
- Reduced fees and fines incurred due to poor power factor or other such problems
- Reduced power bills
- Compliance with regulatory standards such as OSHA and NEC
- Protective device settings that provide the most optimal mix of properly rated & calibrated protective equipment
- Enhanced safety of personnel for arcing events

Call 800-931-8573 or visit

# Hastings' Ground/Jumper Assembly Tester Used Worldwide

Hastings is a worldwide supplier of hot line tools and equipment with products in use in more than 50 different countries. With a passionate commitment to innovation, Hastings' products make the job safer and easier.

Hastings' Ground/Jumper Assembly Tester is designed to test in-service grounding and jumpering cable assemblies. Regular periodic use will ensure that jumper assemblies perform as designed for personnel safety. The tester is completely self-contained, portable, and sets up in seconds.

Any standard 120-volt grounded outlet will provide power to the tester. A reference chart is provided for #2, 1/0, 2/0, and 4/0 Str. Cu. cables of specific lengths to determine correct test values. A built-in digital meter allows the operator to easily input the correct voltage specified on the reference chart for various sizes and lengths of cable. A built-in ammeter tells the operator if the assembly is in good working condition.

Test electrodes are available to fit a variety of grounding equipment including elbows, grounding bushings, and ball socket clamps. Maximum voltage output is limited to protect the operator. Pressure sensitive inspection labels are available to tag cables after testing.

The Ground/Jumper Assembly Tester, model 7714, can be found on page 500 of Hastings' online catalog.

# As Remote Work Remains High, PRO-LAB Raises Awareness for Radon-Free Home Office Workspaces During National Radon Action Month and Center for Disease Control's National Radon Week

*Industry leader PRO-LAB's efficient radon test kits can identify radon in workspaces.*

Many Americans' jobs transitioned to remote work during the COVID-19 pandemic, turning their homes into their offices. Going into 2022, remote working remains high, with Gallup recently reporting that 45% of full-time employees in the U.S. are still working from home either all or part of the time. Gallup's findings also found that 13% of American full-time employees planned to work exclusively from home in the future and 31% planned to work in a hybrid model,[1] so having a safe place to work at home will continue to be a necessity. One hazard that could interfere with a safe home office is if a house has elevated levels of radon, a deadly radioactive gas that rises from decaying uranium under ground

into homes through openings in foundations or basements. As January is National Radon Action Month and National Radon Week (January 24th – 28th), PRO-LAB is bringing this silent killer to the attention of more Americans and giving them a way to detect it with its Radon Test Kits.

"Radon is a silent killer that more people should be conscious of and know how to detect, and PRO-LAB is proud to increase awareness of this dangerous gas," said PRO-LAB founder and CEO James McDonnell. "Our test kits provide people an easy way to find out their house's radon level and take the first step toward ensuring their home a safe place to live and work."

PRO-LAB promoting awareness of this hazardous chemical comes at the time of greatest risk for high radon. Though radon can make its way into homes at any time of the year, homes tend to

- \$40\* Fee Required for EPA Approved Lab Method Results

\*ADDITIONAL \$20 FEE REQUIRED FOR NJ RESIDENTS

**Complete Kit Includes:**

- ✓ Instructions
- ✓ Two (2) Short-Term Detectors
- ✓ Pre-Paid Return Mailer

**Am I At Risk?**

It is estimated that radon kills approximately 21,500 people each year. Nearly 1 in 15 homes are estimated to have elevated levels of radon. Radon gas is the #1 cause of lung cancer in non-smokers. Radon can show up in any home or office. You may have radon in your home or office even if your neighbor does not. The risk of developing lung cancer from radon exposure can increase depending on:

1. the level of radon in your home or office;
2. the amount of time you have spent exposed to radon;
3. whether you are a smoker or have ever been exposed to tobacco smoke.

Fall Protection for Life and Compliance

SAFETYRAILCOMPANY.COM | 888.434.2720

# WE HAVE THE ROPE TO GET THE JOB DONE.

**BUCCANEER**  
rope company  
*Providing strength & stability, with a twist.*

reach their highest radon levels during the winter.[2] This is because furnaces in homes without cold air returns draw air from basements and crawl spaces to provide heating, accelerating the rise of radon through the ground.[3] According to the Environmental Protection Agency, radon is the number one cause of lung cancer for non-smokers and causes 21,000 lung cancer deaths a year. [4] Because radon is invisible and odorless, a remote worker could spend days working in the basement or guest room they have converted into an office and never know that they have been taking in a dangerous, cancer-causing chemical.

That is where PRO-LAB's Short Term Radon Test Kits come in. With PRO-LAB Short Term Radon Test Kits, one can easily find out whether their house has a high radon level by opening the kit's vials and leaving them exposed to air for 96 hours. After the necessary exposure time, the test kit's vial is recapped and mailed to PRO-LAB's laboratory for an EPA-certified analysis with guaranteed results within one week. The EPA's acceptable level of radon is four (4) picocuries per liter. If the PRO-LAB test kit produces a result higher than the recommended level, one should take steps to reduce the levels by keeping vents to crawl spaces open, minimizing time spent in low areas like basements, increasing the circulation of outside air in to the home, and calling a professional radon mitigator who will install a radon mitigation system.

PRO-LAB's Short Term Radon Test Kits cost \$13.70. For more information visit [ProLabTestKits.com](https://ProLabTestKits.com).

#### About PRO-LAB

Selling microwave leakage detectors that his brother invented door-to-door gave PRO-LAB founder Jamie McDonnell the idea for his own creation: Home safety kits for people to check their homes for lead, radon, asbestos, bacteria, and other health hazards. This spark of inspiration led to him fulfilling the American dream. Now, PRO-LAB has served as the leading producer of home test kits for 25 years, bringing in \$200,000 annually. PRO-LAB's test kits provide accurate and reliable measurements of dangerous pollutants in a building's air, water supply, and surface areas. It is the one and only test kit producer to have its own 40,000 square foot testing laboratory, where kits are sent after use for evaluation. With 15 different testing kits available, PRO-LAB helps home and facility take their first step toward making their living and working safe. •

## Hydraulic Detachable Gooseneck

For more than two decades, our Hydraulic Detachable Gooseneck Trailer has been North America's bestselling detachable lowboy for construction professionals—and for good reason.

It's engineered to make unhooking, loading and unloading, and hooking up again a simple one-person operation.
