HAVER & BOECKER at Achema

Together with its technology subsidiaries Feige FILLING, AVENTUS and HAVER Automation, HAVER & BOECKER will be presenting the development of its Machinery Division to a Service Division using a hybrid booth atACHEMA, hall 3.0 booth F38. Visitors can expect models and machines directly on site, an intensive and comprehensive live digital program with streaming for a 360-degree view, and filling and palletizing processes by real machines. In addition, there will be the possibility to connect to the respective technical experts in the facilities in Oelde and Warendorf and interactively get answers to questions on current topics.

Feige FILLING is the market leader for filling liquid and pasty products. This year the company is celebrating its 50th birthday. The initial vision to simplify and automate the filling of liquids into drums is still Feige FILLING's core competence today.

AVENTUS specializes in packing free-flowing bulk materials, such as chemical and petrochemical products, salt or fertilizer.

HAVER Automation offers solutions for digital control, monitoring and analysis of processes, from packing to logistics.

Together in PERFECT FLOW – hardly a product that cannot be handled

From stocking to filling and palletizing, to the digital networking of entire plants and systems, HAVER & BOECKER is a technology leader in the packaging industry that combines the products and services of its subsidiaries to create the optimum material and work flow for its customers. It has the motivation to create completely tailored solutions for each customer. In doing so, all companies together cover an extensive range of fillable products in almost every branch of industry. Building materials and minerals, chemicals, food, pharmaceuticals and cement are just to name a few. With this expertise and decades of experience, customers are offered high-quality, market-leading technologies that also come with unique service.

HAVER & BOECKER will be presenting new products from its ADAMS® series

Clean, weatherproof and safe: these are features that also meet high hygiene requirements. With the ADAMS® technology, powder products are filled into preformed bags made from a continuous tubular film. During filling, air is extracted from the bag with the aid of a vibrating lance and a compactor. Next the packaging itself is hermetically sealed. The result: completely sealed and very compact bags. At Achema, HAVER & BOECKER will be presenting

First there was 4 square...
and now the **REVOLUTIONARY 5 Square® Box!!**

You've struggled with 4 Square boxes for years - you know how small, cramped and time consuming they are. Finally, there is a solution that allows you the space you have always needed.

The **5 Square®** Boxes (5" x 5" x 2-7/8") provide up to 88 in³ of interior volume which more than doubles that of most existing boxes on the market.

Create a robust and unrivaled infrastructure for the life of your facility with the **5 Square®** Products!

Fire Signal

- TWICE THE VOLUME AS MOST BOXES
- SAVE LABOR...INCREASE PROFITS

Providing strength & stability, with a twist.

new technical solutions for the ADAMS® technology, which can be used to fill an extended range of products, especially for the pharmaceutical industry.

A new touchscreen from Feige FILLING offers the most modern type of HMI

The FEIGE WEB HMI was developed and adapted to suit customer requirements. Its multi-touch and gesture control as the interface between man and machine impresses its users. A particularly intuitive design ensures quick orientation and optimum use by employees and consequently higher productivity and shorter training times are achieved. In addition, the new recipe management with grouped parameters provides an improved overview. Photos and videos now support alarm-related help texts for easy understanding. At Achema the new FEIGE WEB HMI will be presented live for the first time on the ELEMENTRA 19 semi-automatic drum filling station.

AVENTUS introduces the currently fastest FFS machine. With an hourly output of over 2,600 bags, the TOPAS SF offers several advantages on the international market which makes the packing of free-flowing bulk materials particularly economical and efficient. The machine features a high protection against dust contamination and thus contributes to a cleaner working environment. The integrated operating system requires very little maintenance and is designed for production at maximum output. AVENTUS also plans to present an all new high-performance palletizer for the chemical industry.

HAYER Automation: less downtime thanks to intelligent systems

The QUAT²RO® System Intelligence covers the entire range of digital options for intelligent networking, control and analysis of machines. The system has been significantly enhanced and today offers, among other things, the integration of an OEE system that reveals optimization potential through complex key figures. The newly developed QUAT²RO® Batch System, which documents every product batch to support quality management, will also be presented. The systems from HAYER Automation provide data in real time and enable direct connection with experts in case of critical situations. Early detection of potential maintenance problems, cost reduction and optimum resource planning are just some of the many advantages of intelligent systems that are individually adapted to specific customer requirements.

The PROcheck approach – maximizing results hand-in-hand

With the new life cycle approach PROcheck, HAYER & BOECKER accompanies its customers through the entire life cycle of their machines, thus uncovering the full potential of their processes. The aim is to continuously optimize ma-

chines, systems and plants so that they operate safely, profitably, effectively and successfully - for achieving a perfect process. Customers thus will find themselves optimally positioned at all times to achieve their goals. The PROcheck approach includes diagnostics, rebuilds and modernization, spare parts and consumables. It is also offered by the technology subsidiaries as an individual all-round service.

With PLANET BLUE, a future that is worth living
HAVER & BOECKER, Feige FILLING, AVENTUS and HAVER Automation together are striving to improve mankind's living conditions. Special energy savings management, the use of secure digital solutions and the safe filling and delivery of the products without product loss are turning this vision into reality. Customers thus can make a small but valuable contribution to the careful use of materials and resources and reduce CO2 emissions.

SENSERT™: Affordable, Diverse Whole-Plant Remote Monitoring is Here

Easy operation, customizable thresholds, uses any sensor

ATC Diversified Electronics, a trusted name for decades in plant automation, motor protection, electrical safety, and power quality, has introduced scalable technology that makes it possible to remotely monitor critical processes for a wide range of conditions. SENSERT™ remote monitoring and alert system sets up easily, is affordable, and uses your existing sensors – there's no committing to costly, proprietary sensors.

A variety of sensors can be hardwired directly to the SENSERT base unit or wirelessly connected via the SENSERT remote I/O for true wireless, remote, online capability. Sensor data is monitored in real time and alerts are triggered based on customizable thresholds, easily configurable through the SENSERT mobile app or web portal. Each channel can be configured for a high and low threshold value as well as custom alerts. Perhaps best of all, SENSERT works with any commercially available 0-20 milliamp, 4-20 milliamp, 0-5 volt or 0-10 volt sensors.

SENSERT is engineered to monitor sensors in critical

processes and provide alerts to the user in numerous environments. It can monitor a vast range of conditions including level, temperature, pressure, flow, and current—as well as vibration, presence of voltage, and others.

The system can immediately impact multiple, diverse industries with endless potential applications within these industries: water/wastewater, agriculture, oil & gas, communications, manufacturing, electronics, medical, industrial, electricity, food & beverage, and more.

SENSERT is a modular approach to whole-plant remote process measurement and monitoring. Where traditional condition monitoring systems are often siloed and only monitor for a limited number of condition types, SENSERT measures many. It does so using any sensors in the appropriate milliamp/volt parameters, while offering true wireless, remote, online capability. Plus, SENSERT is a surprisingly affordable option and easy to set up. Anyone with very basic electrical knowledge can go from the box to receiving data in less than an hour.

It's Lights Out for Dust, Debris, and Fog with Brass Knuckle® Midnight Safety Glasses

Feature-packed eyewear takes everything work can throw at it

Clear vision is vital to most every job out there and Brass Knuckle® has created eyewear that can handle just about anything work throws at it. Dust and debris? Fog? No matter the threat, it's lights out with new Midnight (BKDST-1050AFP) Safety Glasses. If it can impair a worker's vision, Midnight puts it to bed. The trifecta of face-tight gasket, SideShield, and wraparound protection makes work comfortable for the wearer, and life miserable for dust and fog. The lenses feature BK-Anti-FOG+, the world's best anti-fog protection, to keep vision clear in high-moisture, high-heat conditions.

Each pair features a removable gasket made of soft-but-tough EVA foam, forming a dust filter that completely fills the gap between the glasses and the face, to seal in eyes and keep dust out. When opened to wear, exclusive SideShield earpieces meet extended lenses at a tight, precision-cut seam for true wrap-around protection. It's the ultimate weapon against dust ingress.

Next, Brass Knuckle bonds its industry-leading BK-Anti-FOG+ directly to the lens, adhering to a standard 45-times tougher than the most stringent anti-fog

jescoHYDRATILT™ DUMPERS

HYDRAULICALLY CONTROLLED HOPPERS

These units are ideal where control of the quantity of material dumped or the rate of discharge is critical. They operate off the hydraulic system of your forklift and come complete with male quick-disconnect hoses for easy attachment to the forklift.

standard in the world. How? When developing its line of fog-fighting protective eyewear, there was no antifog standard in the U.S., so Brass Knuckle began developing its science to meet EN 166/168, which was and remains the most stringent anti-fog standard in the world. Then they continued to tweak the BK-Anti-FOG properties until it exceeded those standards.

They didn't stop there, as each lens also offers 99.99% UV protection.

This rugged, versatile eyewear has a substantial feel while remaining lightweight and is paired with firm, flexible earpieces that hug the face with just enough give for all-day comfort, because eye protection only works when it's on the face. Also meets demanding industry test requirements (ANSI Z87.1, EN166UV) and offers abrasion and chemical resistance.

For more information, visit <https://www.brassknuckleprotection.com/products/bkdst-1050afp>.

About Brass Knuckle

Brass Knuckle® grew out of a partnership with one of North America's oldest dedicated safety product supply companies. From product inception to quality control, we manage every aspect of product development to ensure ergonomics, protection and cost efficiency, maximizing compliance and safety. Brass Knuckle is a member of the Volk Enterprises family of companies, whose international strategic alliances with documented professional supply partners allow for a full range of safety products, programs and services to clients across the globe. For more information, contact Brass Knuckle® Safety Products, 1335 Ridgeland Parkway, Suite 120, Alpharetta, GA 30004. Phone: 770-674-8930.
