Raising the Standard of Corrosion Protection for Routine Packaging of Metals

When packaging metal components for shipment or storage, it is important to consider the length of time and environment to which the package will be exposed. The potential for fluctuating temperatures, humidity, and moisture condensation prompts manufacturers to routinely add desiccant pouches to absorb moisture and ideally fend off corrosion. However, this standard shipping and storage procedure is limited in its protection powers. Manufacturers and asset owners can easily raise the standard of protection by supplementing or replacing desiccant with a Cor-Pak® 1-MUL/8-MUL Pouch from Cortec® Corporation.

Safe-T-Nose®

LEAVE NO DOUBT • THIS WAY OUT • EXIT SAFELY

SAFETNOSE.COM • 1-855-723-6673

**IFC/IBC REQUIRED EGRESS
MARKINGS AND SIGNS**

Passive vs. Active Corrosion Protection

Desiccant serves the important purpose of absorbing moisture to protect moisture-sensitive goods. However, when used in this way to inhibit corrosion on metals, protection is limited. Desiccant offers passive protection by only eliminating the source of the problem to the extent that it can absorb moisture. Unfortunately, if there is not enough desiccant to absorb all moisture in the environment, the attempt at corrosion protection may fail.

In contrast, Cor-Pak® 1-MUL/8-MUL Pouches offer active corrosion protection, even in the presence of residual moisture. Vapor phase Corrosion Inhibitor powder inside the pouches vaporize and escape through the pouch's breathable membrane, traveling to and adsorbing on all metal surfaces in the enclosure. This VpCI® molecular layer actively protects the metal by hindering the normal corrosion reaction between metal, oxygen, and an electrolyte (e.g., water) from taking place. When the package is opened and the metal components removed, the VpCI® layer does not require cleaning because it simply evaporates.

How to Use Cor-Pak® 1-MUL/8-MUL Pouches

Cor-Pak® 1-MUL/8-MUL Pouches can be used alone or in conjunction with desiccant or other VpCI® packaging materials. Application is very similar to desiccant pouches; Cor-Pak® 1-MUL Pouches are easy to insert into the package manually or automatically. As its name implies, one Cor-Pak® 1-MUL Pouch provides enough protection for up to 1.0 cubic foot (28 L) of enclosed space. One Cor-Pak® 8-MUL Pouch provides enough protection for up to 8 cubic feet (0.23 m³). The pouches can be added as the sole source of corrosion protection inside standard corrugated boxes, plastic bags, or wood or metal contain-

ers. They can also be used as an extra source of VpCI® to complement other VpCI® packaging materials. For example, while VpCI®-126 Bags or Film do emit Vapor phase Corrosion Inhibitors, adding a Cor-Pak® 1-MUL or 8-MUL Pouch ensures a plentiful dose of VpCI® is present within the container when extra protection may be needed based on the size of the enclosure, the length of the storage period, or the harshness of the environment.

Where to Use Cor-Pak® 1-MUL/8-MUL Pouch

The Cor-Pak® 1-MUL/8-MUL Pouch can be used for almost any metal part that is packaged in a relatively small enclosure. Possible uses include protection of:

- Completed assemblies, parts, and components
- Parts in antistatic packages
- Motors
- Mechanical controls
- Precision machined or stamped parts
- Marine and commercial electronic equipment
- Tools

Real life examples range from storing power plant spare fuses with a Cor-Pak® 1-MUL Pouch inside a VpCI®-126 EM UV Bag, to long-term storage of rear differential units (automotive service parts that might not be needed for 15 years) with a Cor-Pak® 1-MUL/8-MUL Pouch wrapped inside Cor-Lam® LD VpCI® Barrier Laminate.

Whatever the need, Cor-Pak® 1-MUL/8-MUL Pouches are a convenient way to add corrosion protection inside packaging or storage enclosures for an added safeguard in the presence—or absence—of moisture. Contact Cortec® to learn more:

Protect Hands from Prolonged Exposure to Liquids

Brass Knuckle® SmartFlex™ BK350 seals out liquid, keeps hands dry, fights work-related skin diseases

Work-related skin diseases account for approximately 50% of occupational illnesses and 25% of all lost workdays. Protecting the skin from prolonged exposure to liquids — even clean water — is critical to fighting skin disease. Brass Knuckle® SmartFlex™ Full Coat Liquid Resistant Gloves (BK350) feel light and provide allover protection from liquid exposure, sealing out liquids and keeping hands dry, to make them less prone to skin diseases.

SmartFlex BK350 provides this allover protection from liquid penetration all while hands get cozy in a soft polyester seamless knit liner. Soft and seamless means long-wearing comfort and nothing to rub or chafe. Meanwhile, the durable natural latex coating covers the full front and back of the hand to seal out moisture.

To reduce the risk of skin disease, consider multi-purpose gloves that inspire compliance. For example, protection from liquids may not be enough if a glove's lack of grip prevents the wearer from using the necessary tools for the job. To that end, SmartFlex 350 has an additional double dip of latex foam on the palm that provides excellent grip, abrasion resistance, and tear resistance. Although not recommended for oily applications, this glove is an excellent dry or wet gripper virtually anywhere else.

Like all Brass Knuckle® gloves, SmartFlex BK350 is made to fit comfortably. Fingers are tapered and curved. Sizing is carefully considered, and gloves are manufactured to the highest tolerances to ensure flex points match up to the wearer's knuckles.

JLG Expands Authorized Service Provider Network to Support Customers' Maintenance and Repair Needs

The company continues to grow its independent service operations across the nation

JLG Industries, Inc., an Oshkosh Corporation company [NYSE:OSK] and leading global manufacturer of mobile elevating work platforms (MEWPs) and telehandlers, is expanding its network of Authorized Service Providers in the United States to provide equipment repair, warranty, maintenance, inspections, parts and other support services nationwide to JLG® customers, no matter where their equipment is working. JLG's independent service operations are available to complete service work on all makes and models of equipment within their defined territories.

"Many of our customers have limited and overtaxed in-house service capabilities, and they are looking to outsource maintenance and repair work to keep their shops efficient," says Dan Fry, JLG's senior program manager for Authorized Service Providers. "When it comes to maintaining the quality and maximum value of JLG machines, there is no substitute for good preventive maintenance and care. With our network of authorized service providers, JLG confidently provides them with responsive, world-class quality service and support, available throughout the life of our products."

Unitrex XS™ Max Wear. Unmatched performance in the field and in the boardroom.

Electric line stringing is easier and more economical with Unitrex™. Made with a core of Honeywell Spectra®, it is up to 10 times lighter than steel, while delivering comparable strength. The urethane-coated polyester jacket provides excellent abrasion resistance for great productivity that lasts.

YALE CORDAGE
Performance. Passion. Possibilities.

77 Industrial Park Road | Saco, Maine 04072 | p (207) 282-3396, f (207) 282-4620

According to Fry, JLG authorized service providers can serve customers in various capacities, including warranty service work, local parts support, inspection services, mobile and in-shop repair services, as well as maintenance and repair work.

Warranty Service Work

JLG service providers are authorized to complete warranty work on all JLG equipment. This service includes processing the claim paperwork and handling all the repairs.

Local Parts Support

With access to the industry's largest resource of JLG genuine and remanufactured equipment parts, as well as a comprehensive inventory of competitive and aftermarket industry parts, available through JLG Online Express, authorized service providers can provide JLG customers with reliable local parts support.

Fry says, "By offering our expansive line of industry products, these independent service locations can help JLG customers keep their fleets running in peak condition, reducing the risk for unplanned downtime and costs associated with needing to call in backup machines."

Inspection Services

When JLG customers need assistance with scheduling, completing, and documenting various inspection services, such as pre-delivery and annual inspections, JLG Authorized Service Providers can help them meet the requirements of machine ownership.

Mobile & In-Shop Repair Services

JLG Authorized Service Providers offer JLG customers a dependable, cost-effective resource to keep their JLG equipment fleets operational in the field.

Maintenance and Repair Work

With an ongoing need for preventive maintenance and repairs on JLG and competitive equipment products within their operations, JLG Authorized Service Providers offer a consistent, trustworthy option to provide these services as and when needed.

To find a JLG Authorized Service Provider, click [here](#). To learn more about becoming a JLG Authorized Service Provider, download the Service Provider Program Flyer or click [here](#) to visit the Authorized Service Provider program page on www.JLG.com •

Marsh Instruments Introduces Differential Pressure Gauges

New offering backed by name and experience of 1.5 century brand

Marsh Instruments is introducing a new line of differential pressure gauges, devices that measure the difference between two inlet pressures in a system using just one instrument. They can help extend equipment life and prevent malfunction. These are the first differential pressure gauges backed by Marsh Instruments' century-and-a-half reputation as the standard of accuracy.

Diaphragm-type and piston-type differential pressure gauges are in stock and available to ship now through authorized distributors. Other configurations will be rolled out soon, and can also be manufactured to specific customer demand.

"For the first time, customers in need of differential pressure gauges can get them from the trusted Marsh name," said Barrett Wall, vice president, sales and marketing, Marsh Instruments. "They can expect a high-quality gauge that is durable, accurate – and in stock. We look forward to continuing to expand our offering to meet the needs of customers throughout our core markets."

Options include aluminum or 316SS wetted parts, multiple dial sizes of 2.5", 4", 4.5", and 6", static pressures up to 6000 PSI, inline, bottom, or back connections/ports, and direct, front flange, 2" pipe, and surface mounting. Maximum/minimum pointer and integrated pressure switches are also available.

Differential pressure gauges from Marsh Instruments can detect clogs, flow abnormalities, and help determine proper system functioning in diverse applications such as oil and gas, irrigation, HVAC, and filtration, as well as measuring liquid levels in cryogenic tanks. Large dial versions are available for use on backflow prevention and test applications in municipal water systems.
