JLG's All-New E18 Vertical Mast Lifts Now Available

Two models to tackle up-and-over work in any application

JLG Industries, Inc., an Oshkosh Corporation company [NYSE:OSK] and a leading global manufacturer of mobile elevating work platforms (MEWPs) and telehandlers, introduces an all-new vertical mast lift series to the market. The new JLG® E18MCL model is well-suited for construction and industrial applications that require outdoor and indoor capable machines while the E18MML model is ideal for finish work and general maintenance work, as well as for cleaner indoor-only applications. Both E18 models are available with a Stock Picker Package Option for warehouse and distribution center applications.

“The new E18 vertical lift series from JLG has been engineered to provide the most important features and benefits: Maximized durability, ease of serviceability and enhanced productivity — while keeping operator safety, confidence and comfort in mind,” says Misty Mason, JLG’s product manager. “These new models offer an efficient and productive way to tackle up-and-over work and an alternative to using ladders and scaffolding.”

According to Mason, the “E” in these models’ nomenclature stands for “Electric,” giving a nod to the machines’ modern DC electric drive system. Equipped with long-running batteries, JLG’s E18 models offer two times more duty cycles than the market-leading competitive machines. And thanks to the batteries being mounted under the platform, the E18s also are designed with improved machine weight distribution for efficient loading and unloading.

Application specific

“One benefit of these new JLG vertical mast lifts is that these machines allow users to access confined spaces,” says Mason. The E18MCL is rated for indoor and outdoor use, opening up unlimited application opportunities. Equipped with solid, non-marketing tires, its scissor-style steering is similar to JLG scissor lifts for quick familiarization and reliable control through tight areas like doorways.

The E18MML is rated for indoor use only, making it an ideal machine for sensitive flooring and finish work applications, including maintenance. Equipped with caster wheels, this model’s Point & Go® steering is the same as the more traditional vertical lift steering style on JLG’s predecessor models.

The Stock Picker Package option, available on both E18 models, includes a fold-down work tray platform with side entry saloon doors, gate alarm and dual amber beacons.

Notable features

These new models come standard with JLG’s field-proven load-sensing system. This pressure-based system monitors the load of persons, materials and tools in the platform to ensure the machines’ capacity ratings are not exceeded.

Optimized for durability, the E18s are engineered with an improved roller system on the extension deck and re-engineered mast guards to reduce the potential for debris to accumulate and hinder the operation.

These models are designed with the operator in mind, featuring modern, ergonomic controls and an enhanced entry/exit from the platform. And, their quick change platform system allows operators to efficiently switch platforms in one minute to suit unique job requirements. There are five different platform options, including extension decks and trays, to choose from to increase productivity.

The new JLG E18 vertical mast lifts share commonality with JLG scissor lifts, including toolless entry into key areas, to enhance serviceability. "This reduces familiarization time and increases efficiency with parts, service and maintenance needs," Mason says. And, she notes, that these models are compatible with the JLG Handheld Analyzer for on-site troubleshooting and are equipped with the onboard Multi-Display Indicator that provides real-time information on the machine.

Mason adds that these models are also available with market-leading options such as ClearSky™ telematics for fleet maintenance and management, CleanGuard™ for leak containment and a USB charger and phone cradle to give operators extra conveniences in the platform.

Spec check

"The new JLG E18 vertical lifts are spec'd for productivity," says Mason. The E18MCL's platform height is 18-ft indoors and 13-ft outdoors, while the E18MML and the E18 with Stock Picker Package Option models have 18-ft indoors. The E18 models also boast a platform capacity of 450 lbs when equipped with the standard platform. "This is 22 percent more capacity than comparable competitive vertical models in the market," she says.

Mason adds, "Keeping machine weight low was also very important in designing these machines."

The E18s weigh 1900 lbs when equipped with the standard platform — a lower gross vehicle weight than comparable competitive vertical models, which are over 2,000 lbs. And, these models are engineered with a zero turning radius and 30-percent gradeability to provide maximum maneuverability in a lightweight machine. "This means that these machines can go on most freight elevators, work on sensitive flooring and fit through doorways," she finishes.

JLG's new E18 vertical mast lifts are now available to order. For more information on these new models, click [here](#).

For more information on JLG products and services, please visit www.JLG.com •

The advertisement for Jesco Industries features a collage of images showing different models of scissor lifts, including a large indoor model and several smaller outdoor models. The Jesco logo is prominently displayed at the top left, with the tagline "Since 1932". To the right of the logo, the company's address is listed: "Jesco Industries, Inc., 950 Anderson Rd PO Box 388, Litchfield, MI 49252-0388". A "ProGMA" logo is also present, with the text "PROTECTIVE GUARDING MANUFACTURERS" and "Safer by Design". A circular seal on the right side of the ad reads "Jesco does it best!". At the bottom, a large call to action encourages visitors to "Visit JescoOnline.com" and "Call 800-529-6697".

- Hinged thigh strap keeps knee pads in place during use
- Adjustable quick-fasten buckle plus hook and loop strap provide secure fit
- Heavy duty stitching, hard plastic and metal rivets for durability
- Perfect for jobsites that require heavy duty protection for the knee
- Sold in pairs

“Professionals in various trades, both indoor and outdoor, require work on or near the ground, which can cause stress and pain to their knees,” says Chandler Duchaine, product manager at Klein Tools. “These new Heavy Duty Hinged Knee Pads are perfect for all-day heavy duty knee protection. The gel and foam padded pockets distribute pressure for comfort, and the large knee pad surface provides stability and agility when moving side to side. Plus, an adjustable quick-fasten buckle and hook means a secure fit.”

Ready Outdoor Power Equipment for Winter Storage, Prep Your Snow Thrower

Prep Equipment for Seasonal Changes, Save Time and Future Headaches

After your lawn gets its last seasonal cut, it is time to put away spring and summer outdoor power equipment, like lawn mowers, leaf blowers, and trimmers. What's next? Snow throwers, generators and other small engine equipment need to be readied for winter. How and when you prepare your equipment for seasonal changes can save you time and money later, says the Outdoor Power Equipment Institute (OPEI).

"Over the last few years, we've learned our outdoor spaces are more important than ever so making sure you've got the means to care for your yard is critical," says Kris Kiser, President and CEO of the Outdoor Power Equipment Institute and Equip. "Preparation is everything -- understanding how to store equipment and get it serviced, how to operate it safely, and how to ready your space to use that equipment."

Omega Industrial Products - The Nation's Leading Supplier
Of Safety Barriers & Guarding Products

OPEI encourages everyone to follow their manufacturer's guidelines and to keep kids and pets away from operating equipment at all times. Here are a few tips to ensure proper equipment storage, maintenance and safe handling:

1. Review owner's manuals. Know how to handle equipment safely including how to turn off equipment quickly and safely. Lost manuals can be found online. Save a copy on your computer, so it can be consulted when needed.
2. Service all equipment. Before storing spring and summer equipment, clean and service it or take it to a small engine repair shop. Drain and change engine oil and safely dispose of old oil. Service the air filter, and do other maintenance as directed by the owner's manual. Check winter equipment and see if any maintenance and repairs are required.
3. Handle fuel properly. Unused fuel left in gas tanks over the winter can go stale and even damage equipment. Before storing equipment, add fuel stabilizer to the gas tank, then run the equipment to distribute it. Turn the engine off, allow the machine to cool, then restart and run until the gas tank is empty. For winter equipment, buy the recommended type of fuel no more than 30 days before use. Use fuel with no more than 10% ethanol in outdoor power equipment. Use a fuel stabilizer if recommended by the manufacturer. Get more information at LookBeforeYouPump.com.
4. Charge batteries. Remove and fully charge batteries before storing. Don't store batteries on metal shelves or allow them to touch metal objects. Store them on a plastic or wood shelf in a climate-controlled structure.
5. Shelter equipment from winter weather. Store spring and summer equipment in a clean and dry

place such as a garage, barn or shed. Winter equipment should be kept away from the elements, but be easily available for use.

6. Prepare, prepare, prepare. Make space in the garage or basement before the weather changes, so there is room to store larger yard items. Clean up your yard. Remove sticks, debris, dog and kid's toys and other items that can damage or destroy equipment. Clear the paths used regularly in your yard.
7. Use generators with care. Keep heavy duty weatherproof extension cords on hand. Ensure the length of the cord will connect to the generator when it is a safe distance from the house or building. Never operate a generator indoors, in a garage, breezeway or under an open window. Install a carbon monoxide detector in your home.

Unison Launches Advanced Tube Bending Application App

Unison Ltd, the UK's premier manufacturer of tube and pipe bending machines, has launched an all-new version of its industry leading, free-to-use Tube Bending Application app. With intuitive new features, it is believed to be the most advanced app of its kind for users of tube bending machinery.

The app makes it simple and straightforward for tube bending machinery operators to establish the required tooling type, mandrel style, size and material, as well as bend torque and machine size. As an additional benefit, a clear, simple indication of 'application difficulty' - the difficulty of bending virtually any metal, wall thickness and diameter - is also provided. Where customers are looking to bend new components or start new projects, but do not have the correct tooling or machinery, the app provides a valuable feasibility/viability check, detailing essential data regarding the equipment they will need to use.

New user-friendly features

In creating their all-new Tube Bending Application app, Unison's in-house software design team introduced a whole range of user-friendly, intelligent new features. These include a new project-specific filing system and a new dashboard for instant access to tube data, project notes, tooling setup, mandrel

setup and machine power. There is an updated conversion tool for transforming XYZ coordinates into YBC bending data. As in previous versions of the app, units of measurement can be displayed as either metric or imperial, while reports can be downloaded in PDF format for desktop filing, sharing, review and consideration.

First introduced in 2012 for iPhone, and regularly updated, Unison's Tube Bending Application app quickly became an essential tool for application engineers and tooling designers. As the app grew in popularity, and requests for android and desktop operating systems were received, in 2018 it became fully web-based, with a mobile-friendly look and feel.

Revolutionising the way bend data is calculated

"Since it was first launched some ten years ago, our free Tube Bending Application app has revolutionised the way customers calculate bending criteria, providing them with a rapid insight into the necessary tooling setup, machine type and torque required to successfully complete even the most complex of bends," comments Unison Ltd's joint managing director, Alan Pickering. "Never content to rest on our laurels, in our latest app, we have made significant improvements to useability and navigation, as well as enabling users to organise files into a folder structure that can be accessed across all their devices. We will soon also be linking the data created by the app to our comprehensive bend tool quoting and manufacturing offer. This will provide users with a seamless, rapid means of costing and ordering any tooling they require.

"Before creating our all-new app," he continues, "we took the time to consult with a number of customers – all to ensure that it would bring even greater value to their tube and pipe bending processes. The new app does precisely that and is a further reflection of our commitment to not only build world-leading tube bending machines, but also provide the finest software and support systems to maximise their usage. We are incredibly proud that around the world, Unison software is considered to be the most user-friendly for tube manipulation tasks."

How to access Unison's new Tube Bending Application app:

Companies wishing to register to use Unison's new app simply need visit <https://app.unisonltd.com> Existing users will be able to enjoy all the new features of the app when they next log in.

Unison Ltd: intelligent tube technology

Unison Ltd is the UK's leading manufacturer of tube and pipe bending machines and continually innovates the tube and pipe bending marketplace. The company manufactured the world's first all-electric tube bender in 1994, followed by the world's first all-electric multi-stack tube bender, then the world's largest all-electric tube bender for the shipbuilding industry. Available in single-stack, multi-stack and right/left varieties, Unison machines are delivered to more than 20 countries globally. Unison's tube bending software is recognised as the most user-friendly control system for tube bending machines. The software is written and supported by Unison, ensuring complete control of its evolution, with no need for third party support.
